The screenshot displays a web harvester interface with two main panels: "Harvester" on the left and "URL's Harvested" on the right.

Harvester Panel:

- Search criteria: `M` (selected) and `C` (available).
- Options: Custom Footprint, Platforms. A "Platforms" button is also present.
- Keywords: 2. Proxies: 3.
- Keyword list: `it.wikipedia poesia` and `site:it.wikipedia.org inurl:sonetti`.
- Buttons: Import, Scrape, Save, Dups, Clear.

URL's Harvested Panel:

URL's	PR

The screenshot displays a web scraping application interface. On the left, a table titled "URL's Harvested" lists various URLs from the domain "justgiving.com" along with their PageRank (PR) values, which are mostly represented by dashes. Below the table, it indicates "Harvested: 824" and provides buttons for "Start Harvesting", "Stop Harvesting", "List", and "Clear".

On the right, the "Manage Lists" panel is visible. It contains several buttons: "Remove / Filter", "Trim to Ro...", "Check Pa nera", "Check Indexe...", and "Grab / Check". A green arrow points to the "Grab / Check" button, which has a dropdown menu open. The menu options are:

- Grab emails from harvested URL List
- Grab emails from a local list
- Grab comments from harvested URL list
- Grab meta info from harvested URL list
- Check for unregistered domains

At the bottom of the "Manage Lists" panel, there are "Update" and "Activate" buttons, and a note: "Latest version: v1.16.3" with a link to "Hover for more details".
